

# How to Setup Distinctive Ringtone

Version 1.1

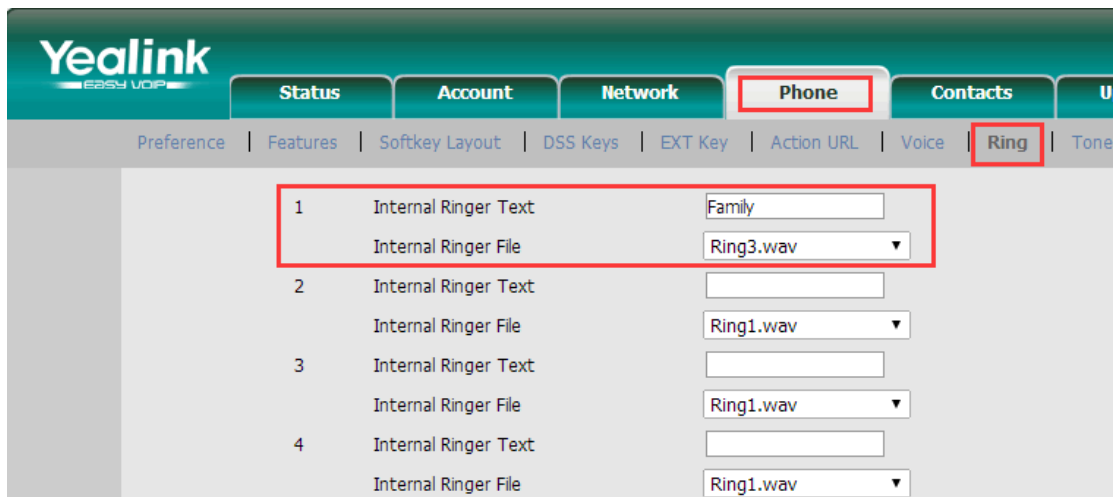

Date: Apr 9<sup>th</sup>, 2015

**Yeastar Information Technology Co. Ltd**

Distinctive ring tone distinguishes calls from different inbound routes. In order to use this feature, the IP phone must also support distinctive ringtone. Let's try set up a distinctive ring tone for one inbound route.

**Step 1.** Enter the Web GUI of the IP phone. Here we take Yealink T28 for example.

**Step 2.** Click "Phone" and "Ring". Name the first Internal Ringer Text, in the Internal Ringer File, choose a ringtone you wish to use. In this way, distinctive ringtone is enabled on IP phone.

**Step 3.** Log in MyPBX Web interface, enter the inbound route edit page. In the field of Distinctive Ringtone, fill in the name of the Internal Ringer Text we just named. Make a call to MyPBX through the configured inbound route, the ringtone is just the one we have chosen.
